

Exercise – 10 Program using NodeJS

- a. Write a Node.js program that reads all the greetings from the file greetings.txt, asks the user "What is your name?", then prints a random greeting followed by the given name. Make sure to check for the case where the file doesn't exist! For example, if the greeting is "Hey", then the program will print "Hey, Joe" to the console, then pick some other greeting and do the same until finished. Use Non-blocking I/O.
- b. Write a Node.js program that reads all the greetings as before. When all the greetings are loaded, it creates a server listening on port number 8080. On request, it checks for whether there is a name value in the query string. If there isn't, the value of query.name will be undefined.

In other words, if you access <http://localhost:8080/?name=Mike>, then your browser should just display something like "Hello, Mike" when the page loads.

greetings.txt

Hello
Hey
Hi
What's up
Welcome
